To whom it may concern,

The Shingle Mill project is going to impact every Rockland citizen who lives in close proximity to the project. They state they will have to bring in a great deal of fill. 50 truckloads of fill per day for a month at least. I already have a pump in my basement. What is that going to do to the water table? I am sure I will be either flooded or my pump will be running all the time. We are already restricted for any water useage outside the home. 236 units will increase the water useage that we are already having a problem with. We are already at useage capacity with our sewer system. This project would not be good for this area or our town. Why build a building higher than any building in our town? Not necessary. Please do not allow this project to go through. There is only one way in and one way out. If this project goes through, we will have a major problem getting out of our street. We will have to go a long way around just to get to the grocery store. This project will impact many people and not in a good way. I hope your job is to take in all the facts and protect our resources and Rockland citizens. Russell Erikson and Judith Erikson
